Don't Trust Your Company's Critical Data and Operations to Just Anyone! This Business Advisory Guide Will Arm You With 21 Revealing Questions You Should Ask Any Computer Consultant Before Giving Them Access to Your Company's Network

Choosing the wrong computer consultant to support your network can be not only incredibly frustrating and expensive, but could also cost you in downtime, data loss and expensive repair bills, not to mention the headaches and frustration!

Read this guide and you'll discover:

- ✓ The “dirty little secret” to the computer repair industry that most people don't know and will NEVER be told by their current IT guy (Knowing this alone could save you from wasting tons of money and untold aggravation when outsourcing your computer support!)
- ✓ 21 revealing questions that will help you instantly spot an unethical or grossly incompetent computer repair/support technician in minutes
- ✓ 4 costly misconceptions business owners have about computer maintenance and repair, one of which you will need to know BEFORE you talk to anyone on the phone
- ✓ Viruses, worms, spyware and hackers: what you need to know to protect yourself
- ✓ 5 mistakes to avoid when choosing a computer consultant
- ✓ Why “cheap” or “lowest price” computer consultants aren't the bargain they initially appear to be
- ✓ The one surefire sign that you should run – not walk – away from a computer support firm

Provided as an educational service by:

PEDRO NUÑEZ
CEO, IT Management Solutions, LLC.
90 Stiles Road
Suite 202
Salem, NH 03079

From The Desk of: Pedro Nuñez
CEO, IT Management Solutions

Dear Colleague,

Choosing a computer support company isn't easy. There is no shortage of horror stories about incompetent computer repair “gurus” bungling jobs and causing MORE problems as a result of their loose morals or gross incompetence. I'm sure if you talk to your own friends and colleagues you will get an ear-full of the unfortunate experiences they have encountered in this area.

Why is this? It's because the computer repair and consulting industry, along with a lot of other industries, has its own share of incompetent or unethical businesses who will try to take advantage of trusting business owners who simply do not have the ability to determine whether or not they know what they are doing. Sometimes this is out of greed for your money; more often it's simply because they don't have the skills and competency to do the job right but won't tell you that up front. From misleading information, unqualified technicians and poor management, to terrible customer service, we've seen it all...and we know they exist in abundance because we have had several customers come to us to clean up the disasters they have caused.

Buyer Beware: The Computer Repair and Consulting Industry Is NOT Regulated

Here's an embarrassing fact about my industry: it is not regulated like many other professional service industries, which means ANYONE can claim they are a “computer repair expert.” **In fact, a lot of the businesses in this industry started because the owner was FIRED or laid off from their job and couldn't find work anywhere else. That means many of the so-called experts are useless and make the sleazy auto repair shops look like the pinnacle of virtue and competence.**

Automotive repair shops, electricians, plumbers, lawyers, realtors, dentists, doctors, accountants, etc. are heavily regulated to protect the consumer from receiving substandard work or getting ripped off. However, the computer industry is still highly unregulated and there are few laws in existence to protect the consumer – **which is why it's so important for you to arm yourself with the information contained in this report.**

Anyone who can hang out a shingle can promote themselves as a computer expert. Even if they are honestly *trying* to do a good job for you, their inexperience can cost you dearly in your network's speed and performance or in lost or corrupt data files. That is why we decided to offer this report.

The information in this Guide is provided to help raise standards within the computer repair and support industry, and to give YOU useful information to help you guard against unethical or incompetent companies and technicians.

Dedicated to serving you,

Pedro Nuñez - CEO

Pedro studied Computer Science at Northern Essex Community College, also served 8 years in the United States Army where he performed his duties as a 91B (Combat Medic), 91D (Operating Room Tech) and 74B (Information and Operation Analyst). It was during his time serving in the military that Pedro fell in love with networks and communications. Shortly thereafter, he integrated this deep passion for communication systems with his successful entrepreneurial skills to create IT Management Solutions.

Pedro believes that compassion, mixed with technical knowledge, can successfully fulfill the business needs of his clients. Pedro lives in Windham, NH with his wife and his triplets, 2 daughters and a son. He enjoys cooking for others and spending time with his kids.

IT Management Solutions Mission Statement

IT Management Solutions mission is to provide the highest quality technology-based services and to do it while being personable, reliable and detailed on our service delivery. Our IT service solutions are given the highest level of management and support using cutting-edge technology. With the utmost quality and consistency, we provide clients with effective solutions making technology an asset to their business and the staff.

Why we're different?

Quite simply, we came into this industry to help other small businesses grow and move forward. We're driven by the philosophy that if we help local businesses solve their IT issues so they can become more profitable and successful, then we will inherently grow along with them. There is no catch, no gimmick, just experience and best practices that we've honed over the years to make our services work for YOUR business needs.

21 Questions You Should Ask Your IT Consultant before Hiring Them to Support Your Network

Customer Service:

Q1: Do they answer their phones live or do you always have to leave a voice mail and wait for someone to call you back?

Our Answer: We answer our phones live from 8:00 a.m. to 6:00 p.m. and give all clients an emergency after-hours number they may call if a problem arises, including weekends. Why? Because many of the CEOs and executives we support work outside normal hours and find it to be the most productive time they have. If they cannot access their computer network AND can't get hold of anyone to help them, it's incredibly frustrating.

Q2: Do they have a written, guaranteed response time to your calls?

Our Answer: We guarantee to have a technician working on a problem within 60 minutes or less of your call. This is written into every service agreement we give to our clients because it's standard procedure.

Q3: Do they take the time to explain what they are doing and answer your questions in terms that you can understand (not geek speak), or do they come across arrogant and make you feel stupid for asking simple questions?

Our Answer: Our technicians are trained to have the 'heart of a teacher' and will take time to answer your questions and explain everything in simple terms. Just look at what **Vanguard Dental Group** had to say:

"Our firm has enjoyed a long and successful association with ITMS. We credit Pedro and his knowledgeable and dedicated colleagues for keeping our systems current, protected and, most importantly, reliable. Their prompt cost-effective service and the support they provide our employees are greatly valued as they allow us to maintain our focus on serving our own patients without disruptions or distractions. We look forward to their ongoing support and guidance in the future".

Q4: Do they consistently (and proactively) offer new ways to improve your network's performance, or do they wait until you have a problem to make recommendations?

Our Answer: We conduct quarterly review meetings with our clients to look for new ways to help improve their operations, lower costs, increase efficiencies and resolve any problems that may be arising. Our goal with these meetings is to help our clients be more profitable, efficient and competitive.

Q5: Do they provide detailed invoices that clearly explain what you are paying for?

Our Answer: We provide detailed invoices that show what work was done, why and when, so you never have to guess what you are paying for. We also double-check our invoices for accuracy before they are sent to you.

Q6: Do they have adequate errors and omissions insurance as well as workers' compensation insurance to protect YOU?

Our Answer: Here's something to consider: if THEY cause a problem with your network that causes you to be down for hours or days or to lose data, who's responsible? Here's another question to consider: if one of their technicians gets hurt at your office, who's paying? In this litigious society we live in, you better make darn sure that whomever you hire is adequately insured with both errors and omissions insurance AND workers' compensation – and don't be shy about asking to see their latest insurance policies!

True Story: A few years ago Geek Squad was slapped with multi-million dollar lawsuits from customers for the bad behavior of their technicians. In some cases, their techs were accessing, copying and distributing personal information they gained access to on customers' PCs and laptops brought in for repairs. In other cases, they lost clients' laptops (and subsequently all the data on them) and tried to cover it up. Bottom line: make sure the company you are hiring has proper insurance to protect YOU.

Q7: Do they guarantee to complete projects on time and on budget?

Our Answer: All projects are fixed priced and guaranteed to be completed on time, in writing. This is important because many unethical or incompetent computer guys will only quote "time and materials," which gives them free reign to nickel and dime you as well as take as much time as needed on completing a project.

Maintenance of Your Network:

Q8: Do they insist on remotely monitoring your network 24/7, 365 to keep critical security settings, virus definitions and security patches up-to-date and PREVENT problems from turning into downtime, viruses, lost data and other issues?

Our Answer: Yes; our remote network monitoring system watches over your network and constantly looks for developing problems, security issues and other problems so that we can address them BEFORE they turn into bigger problems.

Q9: Do they provide you with a weekly report that shows all the updates, security patches and status of every machine on your network so you know for SURE your systems have been secured and updated?

Our Answer: Every week our clients get a detailed report that shows an overall health score of their network and the updates to their antivirus, security settings, patches and other important network checks (like hard drive space, backups, speed, and performance, etc.).

Q10: Is it standard procedure for them to provide you with written network documentation detailing what software licenses you own, your critical passwords, user information, hardware inventory, etc., or are they the only person with the “keys to the kingdom?”

Our Answer: All clients receive this in written and electronic form at no additional cost. We also perform a quarterly update on this material and make sure certain key people from your organization have this information and know how to use it, giving you complete control over your network.

Side Note: You should NEVER allow an IT person to have that much control over you and your company. If you get the sneaking suspicion that your current IT person is keeping this under their control as a means of job security, get rid of them (and we can help to make sure you don't suffer ANY ill effects). This is downright unethical and dangerous to your organization, so don't tolerate it!

Q11: Do they have other technicians on staff who are familiar with your network in case your regular technician goes on vacation or gets sick?

Our Answer: Yes; and since we keep detailed network documentation (basically a blueprint of your computer network) and updates on every client's account, any of our technicians can pick up where another left off.

Q12: When they offer an “all-inclusive” support plan, is it TRULY all-inclusive, or are there “gotchas” hidden in the fine print?

Our Answer: Our “all-inclusive” support plan is just that – all-inclusive. One of the more popular service plans offered by consulting firms today is an “all-inclusive” or “all-you-can-eat” managed services plan. These are actually a good thing because they'll save you a lot of money in the long run – HOWEVER, make sure you REALLY understand what is and isn't included. Some things to consider are:

- Is phone/e-mail help desk included, or extra?
- What about network upgrades, moves or adding/removing users?
- Is hardware included? (For example, Firewall, Access Points, Servers, Switches)
- Is software included? (For example, Microsoft Office, Server Licenses and Antivirus)
- What about 3rd party software support? (We recommend that this IS included).
- What are the costs/consequences of early cancellation?
- What if you aren't happy with their services? Do they offer a Guarantee?
- If the hardware and software is included, what happens if you cancel the contract?
- Are offsite backups included? To what degree?
- If you have a major disaster, is restoring your network included or extra?
- What about onsite support calls? Or support to remote offices?
- Are home PCs used to access the company's network after hours included or extra?
- Is Cybersecurity a solution included on your agreement?
- Is unlimited Remote Support included?

Backups and Disaster Recovery:

Q13: Do they INSIST on monitoring an offsite as well as an onsite backup, or are they letting you rely on outdated tape backups?

Our Answer: We do not allow our clients to use tape backups because they are incredibly unreliable. We make sure that all of our clients benefit from image base backup that allows them to restore complete server environment quickly.

Q14: Do they INSIST on doing periodical test restores of your backups to make sure the data is not corrupt and could be restored in the event of a disaster?

Our Answer: We perform a monthly “fire drill” and perform a test restore from backup for our clients to make sure their data CAN be recovered in the event of an emergency. After all, the WORST time to “test” a backup is when you desperately need it.

Q15: Do they insist on backing up your network BEFORE performing any type of project or upgrade?

Our Answer: We do; that’s simply as a precaution in case a hardware failure or software glitch causes a major problem.

Q16: If you were to experience a major disaster, do they have a written plan for how your data could be restored FAST and/or enable you to work from a remote location?

Our Answer: All clients receive a simple disaster recovery plan for their data and network. We encourage them to do a full disaster recovery plan for their office, but at a minimum, their network will be covered should something happen.

Technical Expertise and Support:

Q17: Is their help-desk US-based or outsourced to an overseas company or third party?

Our Answer: We provide our own in-house help desk and make sure the folks helping you are friendly and helpful. We consider this one of the most important aspects of customer service, plus we feel it’s an important step in keeping your data secure.

Q18: Do their technicians participate in on-going training – or are they learning on your dime?

Our Answer: Our technicians are required to keep the most up-to-date best practices in all the software we support.

Q19: Do their technicians arrive on time and dress professionally?

Our Answer: Our technicians are true professionals that you would be proud to have in your office. They dress professionally, show up on time and if they are delayed (for some odd, unforeseen reason) we always notify the client immediately. We believe these are minimum requirements for delivering a professional service.

Q20: Are they familiar with (and can they support) your unique line of business applications?

Our Answer: We own the problems with all line of business applications for our clients. That doesn't mean we can fix faulty software – but we WILL be the liaison between you and your vendor to resolve problems you are having and make sure these applications work smoothly for you instead of pointing fingers and putting you in the middle.

Q21: When something goes wrong with your Internet service, phone systems, printers or other IT services, do they own the problem or do they say “that’s not our problem to fix”?

Our Answer: We feel WE should own the problem for our clients so they don't have to try and resolve any of these issues on their own – that's just plain old good service and something many computer guys won't do.

The 4 Most Costly Misconceptions About Computer Maintenance and Repair

Misconception #1: My computer network doesn't need regular monitoring and maintenance.

This is probably one of the biggest and most costly misconceptions that business owners have. Usually this is because they've been fortunate enough to never have encountered a major disaster, but that's similar to someone thinking they don't need to wear a seat belt when driving a car because they've never had an accident.

Computer networks are complex and dynamic systems that need regular updates and maintenance to stay up, running fast and problem free. In fact, it's surprising how fast a brand-new PC will slow down after a few weeks of use without proper updates and maintenance. Here are just a FEW of the critical updates that need to be done on a weekly – if not daily – basis:

- Security patches applied – with NEW viruses and hacker attacks cropping up DAILY, this is a CRITICAL part of maintaining your network
- Antivirus updates and monitoring
- Firewall updates and monitoring
- Backup monitoring and test restores
- Spam filter installation and updates
- Spyware detection and removal
- Monitoring disk space on workstations and servers

- Monitoring hardware for signs of failure
- Optimizing systems for maximum speed

Just like car ownership, if you don't change the oil, replace the filter, rotate the tires, flush the transmission and perform other regular maintenance, your car will eventually break down and cost you FAR MORE to repair than the cost of the basic maintenance – and cars are far simpler than a computer network!

If your computer support tech does not insist on some type of regular, automated monitoring or maintenance of your network, then DO NOT HIRE THEM. Lack of system maintenance is the NUMBER ONE reason most people end up losing valuable files and incurring heavy computer repair bills. If your technician isn't offering you these services, you need to find someone else to support your computer or network for two reasons:

1. Either they don't know enough to make this recommendation, which is a sure sign they are horribly inexperienced, *OR*
2. They recognize that they are *profiting* from your computer problems and don't want to recommend steps towards preventing you from needing their help on an ongoing basis. After all, they'll get paid MORE to remove a virus than to make sure your system is patched, updated and secured (which can be done quickly and inexpensively with good monitoring).

Either one is a good reason to get as far away from that person as possible!

Misconception #2: My nephew/neighbor's kid/brother-in-law/office manager knows this computer stuff and can take care of our computers.

Most people look for a part time "guru" for one reason: to save a few bucks, but this often comes back to haunt them. We frequently get calls from business owners who desperately need our help to get them back up and running or to clean up a mess that was caused by an inexperienced neighbor, friend or relative who was just trying to help.

If the person you have working on your machine does not do computer repair and support for a living, there is a good chance they won't have the knowledge or experience to truly help you – they are a hobbyist at best. Do you really want a part-time, inexperienced person responsible for handling something as important as your data and computer network? As with everything in life, you get what you pay for. That's not to say you need to go broke to find a great technician, but you shouldn't be choosing someone on price alone.

Misconception #3: All computer technicians are created equal. Your best option will be the one who offers the lowest price.

As we stated a moment ago, you get what you pay for. A cheap price usually means a cheap job. Really good technicians do NOT work at a discount because they are in high demand just like any other professional. The only technicians that will work for highly discounted rates are those who are just getting started in the business and are very inexperienced.

And some shops will hire college kids or newbie technicians because they will work for next to nothing to gain experience (which means they are learning on YOUR dime), OR they will bring in interns because they don't have to pay them at all. An inexperienced technician like this can end up costing more because:

1. They improperly diagnose problems, which mean you're paying them to fix the WRONG thing and they STILL won't resolve your problem.

Case in point: A few years ago a TV reporter went undercover to 8 computer repair shops in LA with a perfectly working PC, but simply disconnect a cable in the back (a fix that the AVERAGE computer tech would have caught in minutes with a visual inspection). Several shops improperly diagnosed the problem and wanted to charge them anywhere from \$59 to over \$275 to fix it, and some told the undercover reporter that the hard drive would need to be completely replaced!

2. They could take 3 to 5 times as long to do the same repair an experienced technician could fix quickly. Again, you're paying for those extra hours.
3. They could do MORE damage, costing you more money and downtime.

With your client data, accounting records, e-mail and other critical data at stake, do you REALLY want the lowest-priced consultant working on your network and having access to your data?

We take the view that most people want value for money and simply want the job done right. You will find that we are not the cheapest, but we don't apologize for that. As the owner, I decided a long time ago that I would rather explain our higher rates ONE TIME than to apologize for POOR SERVICE forever. That said, we're not the most expensive either. We simply feel that we should offer a good service at a fair price. That's why we have been able to stay in business for over 8 years and have 100 customers who've been with us since the beginning.

Misconception #4: An honest computer support company should be able to give you a quote over the phone.

I wish this were true, but it isn't. Just like a good doctor, an honest and professional technician will need to diagnose your network before they can quote any price over the phone. Consider the example above where all that was needed was a cable connection. If someone brought that PC to us, we would simply reconnect the cable at no charge; however, without SEEING the machine, we could never have accurately diagnosed that problem over the phone.

Also, some consultants will quote you a cheap rate over the phone to get in the door, and then jack up the prices once they get in your office by taking 3 times as long, selling you add-ons and upsells, etc. And finally, reputable firms don't charge by the hour anyway – they give you a fixed fee, flat-rate. Here's why...

One of the easiest ways to take advantage of a customer is to get them to agree to a time and materials repair. Unless you know what's wrong and how long it should take, they can soak you on the hourly fees. What are you going to do when they get 5-6 hours into a repair or project and then spring on you the news that it will take even longer than they anticipated to fix, costing you MORE money?

Always, always, always make sure you get a flat-rate, fixed fee quote in advance so you don't end up getting burned – and NEVER take a phone quote!

5 More Mistakes to Avoid When Choosing a Computer Consultant

1. **Choosing a computer consultant based on a single phone call.** We recommend you invite them into your office and ask them for a written proposal. Be clear on what your expectations are and what type of problems you want them to resolve. A competent professional should offer to do an audit of your network to diagnose your system BEFORE quoting you anything. After all, would you take a doctor's word that you need surgery if they hadn't done x-rays or other diagnostics? Of course not! Prescription without diagnosis is malpractice.
2. **Choosing a computer consultant that doesn't have a written money-back guarantee.** In our view, a good consulting firm should be accountable for their services and fixing things RIGHT. If you aren't pleased with a job that was done, they should (at a minimum) make it right for free, and if they simply cannot resolve an issue to YOUR satisfaction, you shouldn't be stuck with the bill.

Plus, the fact that they stand behind their work with a money-back guarantee shows they have confidence in their ability to make you a happy client. Don't fall for the, "We don't offer money-back guarantees because people will take advantage of us," routine. In our experience, MOST people just want an honest service at a reasonable price. If you give them that, they are happy to pay. Are there a few unethical folks out there? Of course, but they are the minority, and we are willing to bite the bullet on the very few dishonest folks so that we can gain the trust and confidence of the majority of clients who just want their problems fixed fast and fixed right.

3. **Choosing a computer consultant without speaking to several of their current clients.** Check their references! Don't just take the sales guy's word that they are good – ask to speak to at least 3 or 4 clients that are similar to you. If they hesitate or cannot provide you with references, don't trust them!

Another good sign is that they should have multiple client testimonials and success stories posted on their web site and throughout their marketing collateral. A lack of testimonials may be a sign that they don't HAVE clients who are happy enough to provide a good reference – again, a warning sign.

4. **Choosing a computer consultant who cannot remotely monitor, update and support your network.** In this day and age, a computer consultant who doesn't work remotely is living in the stone ages. You want this service because it dramatically increases your network's security and enables faster repairs. That's not to say consultants shouldn't come onsite, but remote monitoring and repairs make fixing problems FASTER for YOU and help PREVENT problems from cropping up in the first place.
5. **Choosing a computer consultant who isn't** focused on delivering professional services and support can be a costly mistake. The half-life of technical knowledge is about six to twelve

months. The more specific and technical the knowledge, the shorter the half-life, therefore, they must be up to date on competencies, and continually ‘sharpen their saw’ by attending events and conferences on an ongoing basis.

A Final Word...

I hope you have found this guide helpful in shedding some light on what to look for when outsourcing the support of your company’s network. As I stated in the opening of this report, my purpose in providing this information was to help you make an informed decision and avoid getting burned by the many incompetent firms offering these services.

If you have any additional comments or questions, we welcome them! Have an idea to make this guide even more helpful? Let us know! And of course, if you are looking for someone you can trust to take over the care and maintenance of “all things digital” in your office, we’d love the opportunity to EARN your business.

Below you will find information on how to request a FREE IT Health Check and Diagnosis. This is, of course, provided for free with no obligations and no expectations on our part. I want to be clear that this is NOT a bait and switch offer or a trick to get you to buy something. My reputation for running an honest and trustworthy business is something I hold very dear. I would never jeopardize that in any way. So why are we offering something like this for free?

Two reasons:

1. We are simply offering this service as a risk-free “get to know us” offer to people we haven’t had the pleasure of doing business with. Again, our goal is to allow you to make an informed and confident decision; offering this service is one way we can help you better evaluate us.
2. This will allow us to determine if we even CAN help you. Obviously we can’t help everyone, and our services might not be a good fit for you. Conducting this Health Check enables us to do a small project for you to help you evaluate whether or not we’re the right company for you without risking your money.

Looking forward to your call!

Pedro Nunez
CEO IT Management Solutions, LLC.

FREE IT Health Check For All Prospective Clients Who Want To Put Us To The Test!

As a prospective customer, we would like to offer you a FREE IT Health Check and Diagnosis (\$599.00 value). During this health check we will perform a comprehensive 50 point network audit of your entire IT environment to look for potential problems, security loopholes, spyware and other hidden problems that will cause the computers on your network to run slow, act funny, crash and lose data.

We will:

- ✓ Review your system backups to make sure they are working properly and CAN be restored quickly in the event of a disaster
- ✓ Scan for hidden spyware, malware and viruses that MOST anti-virus tools and software can't detect or won't remove
- ✓ Check for security updates and patches to validate that your network really IS secure
- ✓ Review your firewall and security settings
- ✓ Check the integrity of your server and workstations hardware (Side Note: Did you know that hardware failure is one of the leading causes of data loss that CAN be detected early and avoided with proper monitoring?)
- ✓ Audit your virus definitions and protection
- ✓ Conduct a visual scan of your server room and cabling to make sure your network is PHYSICALLY safe and set up properly
- ✓ Check your overall system performance, space and settings to see if your network is running as fast as it could be

Why Should You Care About This?

Because there are literally dozens of ways hackers and viruses can access your network—undetected—to remotely control your network, corrupt your data and use your network as a conduit for spreading spam, viruses and even illegal software.

There are numerous system checks and updates that should be done on a regular basis to ensure maximum speed, performance and security. Ignore them and your system will get progressively slower, more unstable and increasingly susceptible to viruses, spyware and hackers.

Tape backups have a failure rate of 100% – that means all tape drives will fail at some point, often without warning. You don't want to find out that your backup was not working the day after your hard drive fried.

How to Request Your FREE IT Health Check:

1. Call me, direct at **617-982-2510**
2. Send me an email at: pnunez@itmsolutions.us

Here are a few other CEOs we've helped:

Fast Response, Reliable, Quality Service and Peace of Mind - All at a Reasonable Price!

DPI Events

The challenge we face is that we are big enough to need a network with specific functionality, but not big enough to require a full-time IT staff person. ITM Solutions provided the perfect solution; they have the technical expertise and mindshare we needed coupled with flexibility in the level of support. They are very responsive, prioritizing important issues that arise and dealing with them quickly and effectively. I also appreciate their detailed follow-up and preventive maintenance; more than once this has helped us avoid a major problem with our network. A lot of companies these days make claims about customer service and looking out for the best interest of their clients.

Excellent Service, Highly Responsive, Extremely Knowledgeable

SDE Engineering

Why we chose IT Management Solutions? Professional expertise and team seemed genuinely interested in helping our organization succeed. From day one IT Management Solutions worked to help with any IT related issues. Even though we're a small Engineering Firm, you've always treated us like a Fortune 500 client. The speedy, friendly service, the cutting-edge technology . . . we'd be lost with our IT needs without IT Management Solutions! I will strongly recommend to any small business looking for a reliable IT provider who is eager to help

Thanks to ITMS, We could concentrate on running our business

Vanguard Dental Group

In IT Management Solutions we found a company that was eager to unburden us of the effort and time we had been spending on I.T meaning we could concentrate on running our business. IT Management Solutions' ongoing management of our IT infrastructure has ensured stability and their realistic proactive approach ensures we don't overspend unnecessarily.

Excellent Knowledge, Responsiveness and Expertise

Paradise Dental Associates

We could not be more satisfied since we switched to ITMS for all of our technology needs 18 months ago. They have helped us do dentistry, which is what we do best. Our systems have been upgraded so everything runs faster, smoother and with little to no effort on our part. Our hardware, software and backup systems are state of the art and we can sleep at night knowing our data is protected. We have been paperless for about a month and without ITMS that would not have happened. We routinely recommend ITMS to colleagues and will happily continue to do so.

An Integral Part of Our Team

Northbridge Companies

We hire to IT Management Solutions in January 2012 to bring our server and computer systems to the next level. They have help all of our communities in Massachusetts, New Hampshire and Maine. They have also help design and implement a business solution that allowed us to share important resources with over 500+ employees quickly and secure. I strongly recommend IT Management Solutions for any company that is looking for a professional, responsible and reliable IT provider

Hiring Pedro and His Staff was the Best Decision I made!

Silverio Insurance

Having IT Management Solution assume responsibility for our IT functions, allowed the company to focus on our core businesses. IT Management Solutions personnel worked closely with my staff and resolved all issues quickly. As I look back over 2006 and the many decisions that were made, teaming up with IT Management Solutions was certainly one of the right decisions. Thank you to Pedro and the staff of IT Management Solutions for all your help, support and a job well done!

Thanks to ITMS we are able to focus on what's important. Our Business

Amherst Village Dental

Pedro and his team are some of the hardest working and consistently superb people I've dealt with in this industry. They have a streamlined infrastructure allowing them to cover all bases and produce excellent results. They know the hardware, the software, the process, and the lifecycle. His investment in his company has positioned them for continued growth without sacrificing customer service in any way. IT Management Solutions is the only company I would consider for my Managed IT Services and Technical Support needs.

Responsive, Helpful and Honest

CCC Financial

I have been working with ITMS since the Fall of 2017. They installed our computers and printers at that time. Every night we are backed up and I feel comfortable knowing all our information is safe. This company responds quickly and is helpful with any questions. I can honestly say I have peace of mind knowing that ITMS is servicing us. I strongly recommend them.
